## Orchid Mist Spray

Orchids thrive in free draining soils and humid conditions. To get the best from your plants water regularly but do not allow plant roots to sit in water. To maintain humidity place the pots on a tray containing hydroleca and mist the plants a couple of times a week.

### How to use:

Use 8-10 squirts to mist the leaves, any exposed roots and down through the bark compost. Repeat once or twice a week.

### Tips:

Shake well before use.  
Do not mist the flowers.

### Watering:

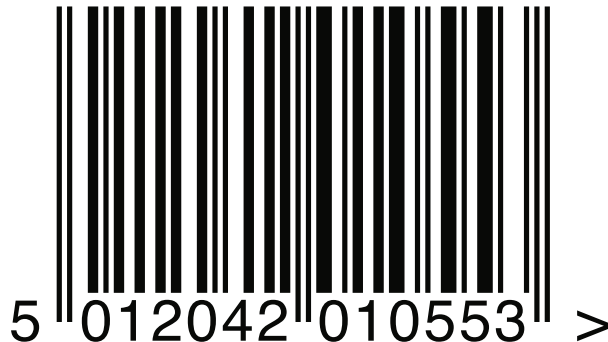

Orchid Mist Spray is not a substitute for watering. Water with clean water as necessary. This bottle will care for an orchid for at least a month.

Orchid Mist Spray contains nutrients and seaweed extracts
