

Seaweed Plus Sequestered Iron

Revives lime-hating plants
Makes 200 litres

Seaweed Plus Sequestered Iron

Seaweed Plus Sequestered Iron

1 Litre

Seaweed Plus Sequestered Iron

Helps plants develop healthy foliage and intense flower colour, correcting iron deficiency and preventing yellowing of leaves, especially in lime hating plants, such as azaleas, camellias, rhododendrons, heathers and citrus plants.

Apply 2 or 3 times a year to lawns to 'green up' and toughen the turf without encouraging excessive growth.

DIRECTIONS FOR USE For the Garden

Measure 1 capful of Liquid Seaweed plus Sequestered Iron, add to 4 litres water and stir well. Apply as a drench using watering can or as a foliar treatment using a fine sprayer or hose-end dilutor, thoroughly wetting leaves.

Ericaceous and acid-loving plants such as rhododendrons, camellias, azaleas, heathers, etc
Apply once a fortnight during the growing season.

Fruit, perennials, bedding plants, shrubs and vegetables
Apply once a month. Do not spray open blooms or after fruit set to avoid possible staining of petals or fruit.

For lawns

Apply 1 capful in 3 litres evenly over 7.5m² (9 sq yds) two or three times a year to produce a dark green sward without encouraging excessive growth.

ANALYSIS	
IRON FERTILISER SOLUTION	
Iron (Fe) Soluble in water	2% w/w

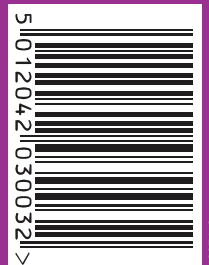

Shake well before use.
Store away from direct sunlight between 0 and 30°C
