

Sulphate of Iron

Vitax Sulphate of Iron can be used to reduce the alkalinity of soils, helping make available the natural elements and nutrients essential to the healthy cultivation of plants which thrive in acid conditions. All calcifuge (lime hating) plants such as Azaleas, Rhododendrons, Magnolias and Conifers, as well as many Ericas and Alpines can benefit from a regular top dressing with Vitax Sulphate of Iron. In addition to improving the habitat, this fertiliser supplies iron – a vital trace element.

Directions for use

Before planting or sowing, work into the soil at the rate of 105 grammes per square metre (3oz per square yard).

ESTABLISHED SHRUBS AND PLANTS:

Apply as a top dressing during the growing season at the rate of 35 grammes per square metre (1oz per square yard). Take care not to spill onto leaves. Lightly hoe in and water well after application.

HELPFUL ADVICE

- Read the directions carefully before use.
- Store the fertiliser in a dry place away from children, pets and foodstuffs.
- Wash hands after use. Product may irritate cut or broken skin.
- Do not exceed the recommended application rates.
- Avoid fertiliser lodging on leaves and stems.
- Avoid accidental spillage onto clothing, paths or other hard surfaces as staining may occur.

Ferrous Sulphate Heptahydrate

EC number 231-753-5

Warning

Harmful if swallowed
Causes skin irritation
Causes serious eye irritation

If medical advice is needed, have product container or label at hand.
Keep out of reach of children.
Wash hands thoroughly after handling.
Do not eat, drink or smoke when using this product.
Wear protective gloves/eye protection.
IF IN EYES: Rinse cautiously with water for several minutes.
Remove contact lenses, if present and easy to do. Continue rinsing.
If eye irritation persists: Get medical advice/attention.
Dispose of contents/container in accordance with national regulations.
