

### HOW IT WORKS

Plant Guard Organic works by physical action providing protection against bugs and mildew. After drying, it creates a residual barrier to limit spore germination.

Spraying removes bugs, fungal spores, dust and grease from the plant preventing pests from laying eggs and allowing maximum light exposure for plant photosynthesis.

The micronized seaweed stimulates plant growth.

Plant Guard can be used outdoors or under glass.

Plant Guard has a high degree of safety to most plants, but some plants in the Euphorbia family (Crown of Thorns) have shown some sensitivity. If in doubt, test first on a small area of foliage to determine plant safety.

Non-toxic in honey bee acute oral and contact toxicity limit tests.

### HOW TO USE

Apply as a fine spray thoroughly covering the upper and lower leaf surfaces. Apply every 5-7 days to remove pests then at monthly intervals during the spring and summer to strengthen and protect the plant.

Wash hands and exposed skin after use. Store in original container tightly closed in a safe place. Note: Plant Guard may stain concrete or other porous surfaces.

Crops can be sprayed and harvested the same day.

### CHILDREN AND PET SAFETY

Children and pets may be allowed into treated areas when leaf surfaces are dry. Plant Guard is not classified as hazardous. It contains water, finely ground seaweed suspended in natural plant and fish oils, **soy** lecithin, emulsifier and thickener. For **allergens** see ingredients in **bold**.
