### HOW TO USE

Shake the bottle before use. Dilute 1 capful (20 ml) in 4 litres of water. Feed the tomatoes at the rates given below:

### GROWING BAGS

From planting out feed weekly using 1 litre of diluted feed per bag, after the first truss of flowers has set, gradually increase to 4 litres per week as the plants grow. Under cover, increase application frequency to twice a week after the second truss has set.

### OUTDOOR TOMATOES

Apply 2 litres of diluted feed per plant every 14 days, rising to once every week, after the second truss has set.

### TOMATOES GROWN UNDER COVER

After first truss has set, apply 2 litres of diluted feed per plant every other watering.

### Storage & Advice

Wash hands after use and wash splashes from skin. Do not keep diluted feed. We recommend using gloves when gardening. Store out of direct sunlight, in a cool dry place between 0°C and 30°C. Keep the concentrated plant food out of the reach of children and pets. Avoid over watering or allowing plants to dry out as this can cause damage to the roots.
