

# ORGANIC Calcified Seaweed

A naturally occurring soil conditioner, Calcified Seaweed has been harvested and used for generations as a natural soil improver.

Applied to soils it is quickly colonised by beneficial soil bacteria, which break down the calcified seaweed structure, gradually releasing calcium, magnesium carbonate and a wide range of trace elements.

This 'sweetens' the soil and together with the increase in microbial activity leads to better soil structure, which in turn helps plants to develop stronger roots, promoting healthier and more vigorous plant growth.

One application every three years will normally prove sufficient to maintain the soil conditioning benefits.

## APPLICATION

Apply to soils at the rate of 70g per square metre (2 oz per square yard) and lightly work in by hoeing, raking or forking.

Dress lawns in early spring to improve soil and grass condition.

**NOTE:** Calcified Seaweed is screened to remove large particles but it is a natural product and can contain a small quantity of seashells, which can break down over time to release calcium.

Do not use with ericaceous/acid-loving plants.

## HELPFUL HINTS

Read the directions  
carefully before use.

Store in a dry place away from  
children, pets and foodstuffs.

Product may irritate cut or broken  
skin.

Do not exceed the recommended  
application rates.

Avoid product lodging on leaves  
and stems.
