

For stronger plants and brighter flowers. This high potash feed helps ripen tomatoes, onions and other vegetables.

Use as a weekly feed for hanging baskets, tubs and bedding plants or as a regular feed in place of normal watering.

**DIRECTIONS FOR USE**

Apply using watering can or hose-end dilutor.

**Hanging Baskets, Tubs and Bedding Plants**

Start feeding from planting out unless a slow release fertiliser has been added, when feeding should be delayed for 4-5 weeks.

**As a weekly feed:** Add 10 g (2 teaspoonsful) to every 6 litres (1½ gallons) of clean, cold water. Stir to dissolve and water the soil or growing media.

**To feed at every watering:** Mix 5 g (1 teaspoonful) to every 9 litres (2 gallons) of water.

**Tomatoes**

Mix 5 g (1 teaspoonful) in 9 litres (2 gal). Use in place of ordinary watering, after the first flowers have set, and continue feeding throughout the season.

**Leeks, Onions, Pumpkins and other Vegetables**

Mix 5 g (1 teaspoonful) in 9 litres (2 gal) and apply the feed to the soil or growing media in place of normal watering from the end of June onwards, to increase yield and promote ripening.

**STORAGE**

If carefully stored the fertiliser will keep indefinitely. After use, re-seal the pack tightly and store in a cool, dry place.
