A concentrated cleaner and disinfectant for use on glass, work surfaces and equipment such as knives and tools in utility rooms, garages, greenhouses and other outbuildings. Cleans ornamental pots and disinfects bird tables. Suitable for cleaning slime build up in capillary matting and irrigation systems, preventing blockage and clogged pipes.

Directions for use

Apply using a hand-operated or low pressure-sprayer, or traditional mop and bucket. Mix 150ml Disinfectant with 4.5 litres of water:
Pre-Cleaning: Remove as much surface dirt as possible before applying. Soaking improves the efficiency of all cleaning operations, particularly in the removal of heavy, dried on soil deposits on floors and work surfaces.
Sanitisation of Pre-Cleaned Surfaces: Drench all surfaces. Leave for at least 5 minutes contact time then rinse surfaces with clean water.
For cleaning irrigation pipes and capillary matting: mix 50ml disinfectant with 1.5 litres of water. Flush the system thoroughly for 15 minutes in the absence of plants and rinse out system with clean water.
Note: If there is evidence of lime scale build up, de-scale the system with a proprietary de-scaler prior to flushing with disinfectant.
One capful contains 20ml.

Vitax Greenhouse Disinfectant contains 2% w/w benzalkonium chloride with orange oil.

Warning

Causes serious eye irritation.
Causes skin irritation.
If medical advice is needed, have product container or label at hand.
Keep out of the reach of children.
Wear protective gloves and face protection.
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing.
If irritation persists: Get medical attention.

To avoid risks to human health and the environment, comply with the instructions for use.
