

HOW IT WORKS

Vitax Rose Tonic contains a mixture of potassium phosphite, the chelated trace element copper and seaweed to help boost stronger growth and flowers.

WHEN TO USE

For best results, apply every fortnight from April to September.

HOW TO USE

Shake well before use. Add 10ml of Rose Tonic per litre of water and, using a hand sprayer, apply as a fine foliar spray evenly covering the leaves and stems.

1 litre of diluted spray is sufficient for a 10m² rose bed.

When using, always make up a fresh solution. Do not store diluted mixtures. Any unused spray can be watered around the roots of your roses.

Roses require regular watering, especially during the summer. Roses grown in pots should be given a

good water daily throughout the growing season. During the summer newly planted roses will also need watering regularly until their roots are established.

DISEASE PREVENTION

Regular use of Rose Guard will strengthen the rose and help protect against rose diseases such as Black Spot and Powdery Mildew. Combine this with cultural control methods to ensure healthy growth and abundant flowering. Collect and destroy fallen leaves in the autumn, or bury under a layer of mulch. Apply Vitax Winter Tree Wash treatment and prune out and destroy all stem lesions in spring before leaves appear. Always disinfect cutting tools before and after use.

ROSE TONIC FEEDS & PROTECTS FOR PERFECT ROSES

contains potassium phosphite

USED BY PROFESSIONAL ROSE GROWERS

Fertiliser Analysis

UK Compound Fluid Fertiliser 0:16.5:11 with Cu

Phosphorus Pentoxide (P ₂ O ₅)	
Soluble in water	16.5% (7.2% P)
Total Potassium Oxide (K ₂ O)	11.0% (9.1% K)
Copper (chelated by EDTA)	
Soluble in water	0.15%

IRL Fertiliser containing Organic Material PK Compound 7.2:9.1 with Cu
