

HOW IT WORKS

Organic Rose Guard works by physical action providing protection against aphids, powdery mildew and other leaf diseases. After drying, it creates a residual barrier to limit spore germination.

Spraying removes bugs, fungal spores, dust and grease from the plant preventing pests from laying eggs and allowing maximum light exposure for plant photosynthesis.

Organic Rose Guard can be used outdoors or under glass.

Organic Rose Guard has a high degree of safety to roses and many other plants, but some plants in the Euphorbia family (Crown of Thorns) have shown some sensitivity. If in doubt, test first on a small area of foliage to determine plant safety.

Non-toxic in honey bee acute oral and contact toxicity limit tests.

HOW TO USE

Apply as a fine spray thoroughly covering the upper and lower leaf surfaces. Apply every 5-7 days to remove pests then at monthly intervals during the spring and summer to strengthen and protect the plant.

Wash hands and exposed skin after use.

Store in original container tightly closed in a safe place.

Note: Organic Rose Guard may stain concrete or other porous surfaces.

Roses can be sprayed and picked the same day.

CHILD AND PET SAFETY

Children and pets may be allowed into treated areas when leaf surfaces are dry. Organic Rose Guard is not classified as hazardous. It contains water, natural plant and **fish oils, soy lecithin**, emulsifier and thickener. For **allergens** see ingredients in **bold**.
