

Dried Blood

A fast acting organic fertiliser, rich in nitrogen, which promotes above ground growth and healthy foliage. Especially beneficial when growing leaf crops such as lettuce, spinach and cabbage.

Dried Blood also makes an excellent top dressing for foliage plants in the greenhouse.

DIRECTIONS FOR USE

Note: A gloved hand will hold about 15-17g (½ oz).

Apply as a top dressing at monthly intervals during the summer months to encourage leaf growth at a rate of 35 grammes per square metre (1 oz per square yard). Lightly fork in and water well after application.

HELPFUL ADVICE

- Read the directions for use carefully.
- Store fertiliser in a cool dry place away from children, pets and foodstuffs.
- Wash hands after use. Product may irritate cut or broken skin.
- Do not exceed the recommended application rates.
- Avoid fertiliser lodging on leaves and stems.

Always wear gloves when gardening

Some animals (particularly dogs) may be attracted to the organic ingredients and may attempt to eat the product. To reduce attraction and palatability mix well into the soil after application.
